Description:

The Okemos Solar Racing Club is a group of students who are passionate about renewable resources, STEM, and cars. We understand that the world has a finite amount of natural resources, including fossil fuels. That's why our club is determined to build a car to compete in the 2019 Solar Car Challenge against high schools from across the country. Next summer, we will race at the Texas Motor Speedway in Fort Worth with only our solar panels and a single charge of our lead-acid battery.
